

Aisance BIKOKA

Full Stack developer

Profil

I am interested in user-centered design, UX/UI design, application prototyping (Figma, Adobe Xd), and software development, both on the backend (Java, Python, Node.js, SQL databases, etc.) and the web frontend (Angular, React.js, HTML, CSS.). My diverse experience on various academic, personal, and enterprise projects enables me to be versatile and independent in the execution of my projects, from gathering requirements to delivery.
